This release addresses the following issues:

This release note describes the system corrections (as reported by Customers) and new enhancements, if any, made in BASSnet 2.11 carried out in the Hotfix 5-032 patch released on 16th April 2024.

Changes/fixes have been implemented in the following modules:

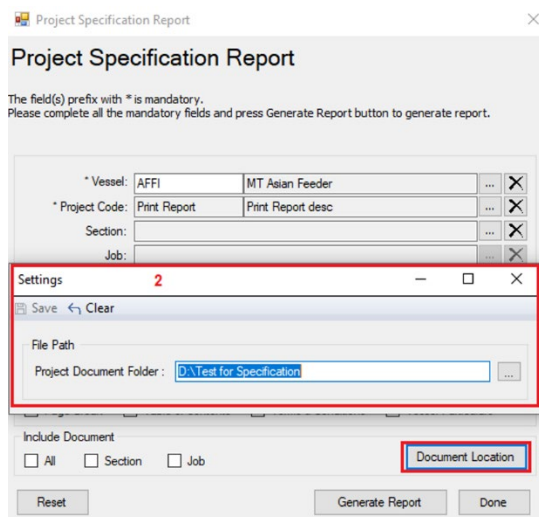

[Projects](#)

Recent Changes

1. Projects

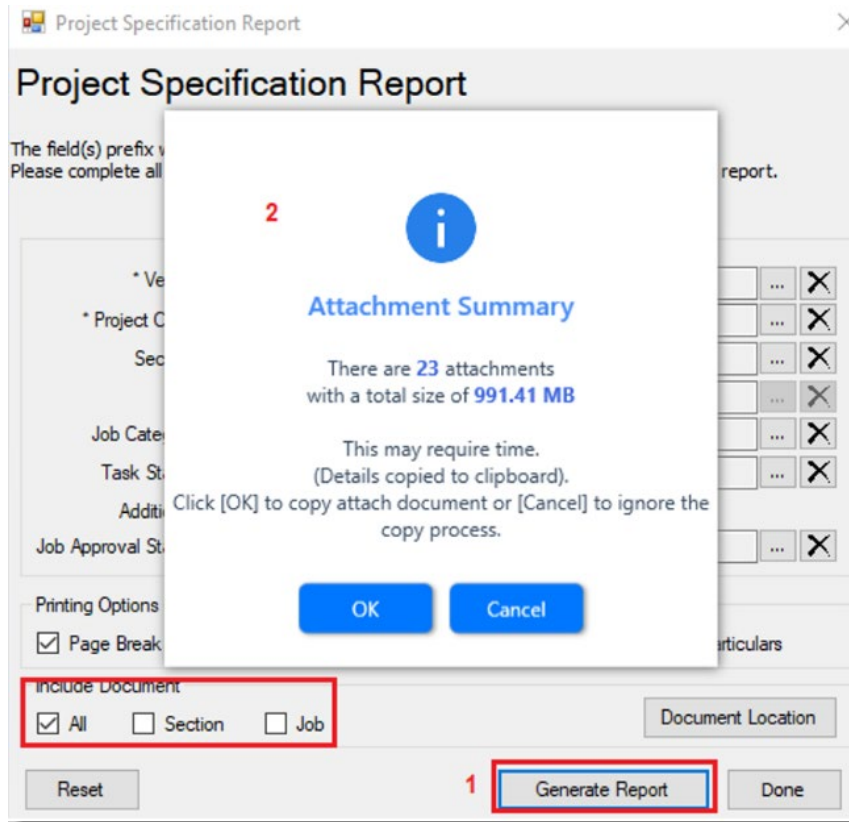

- ❑ [CR 15315] The **Project Specification Report** will now display attached printable documents as hyperlinks instead of embedding them into the report. This change was made to prevent memory issues from happening when the attached file size is large.

To facilitate this change, a new **Document Location** button has been added to the report generation screen for users to specify a *default* location to copy the printable documents.

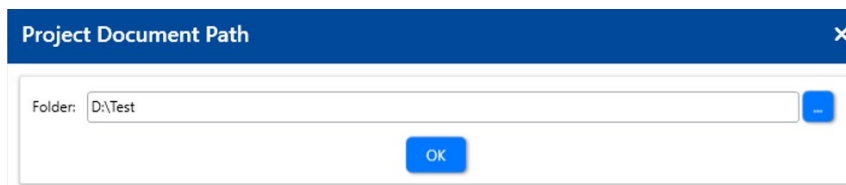

The screenshot shows the 'Project Specification Report' window. It contains several input fields: '* Vessel: AFFI MT Asian Feeder', '* Project Code: Print Report Print Report desc', 'Section:', and 'Job:'. Below these is a 'Settings' dialog box with a 'File Path' section containing 'Project Document Folder: D:\Test for Specification'. At the bottom of the main window, there are checkboxes for 'Include Document' (All, Section, Job) and a 'Document Location' button. The 'Generate Report' and 'Done' buttons are at the bottom right.

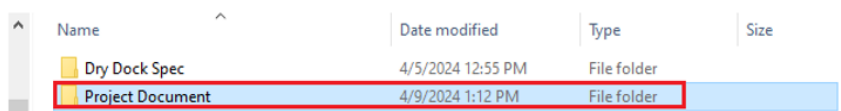

When generating the report with the **Include Document** check box selected, an **Attachment Summary** will be displayed to show the details of the attachments.

Clicking OK will open the **Project Document Path** screen. Click OK again to use the default folder (specified in Document Location) or change to a different path (this will not update the default document location).

A folder will be created at the specified path where the printable documents will be copied.

Note: The Project Specification Report must be saved as *.rtf* or *.docx* file format in order to open the linked documents.

In addition, a new system configuration PROJ_PRINT_DOC_PATH has been introduced where, when enabled, will allow users to define the document file paths as an individual setting instead of a shared setting.

Key:	PROJ_PRINT_DOC_PATH	Module Code:	PROJECT
Description:	Default N which will not allow user to define document file path as individual setting.	Parameter Code:	PROJ_PRINT_DOC_PATH
Descr. Abbr:	Default N which will not allow user to define document file path as individual setting.	Primary Value:	Y
		Secondary Value:	
		Setting Descr:	Default N which will not allow user to define document file path as individual setting.
