This release note describes the new features and functions in BASSnet Inventory App carried out in the 2.1 HF2-000 patch released on 28th January 2025.

Table of Contents

Recent Changes

New Features & Enhancements

❑ **Material Overview: Long-Press Added for Multi-Selection**

[CR 15818, 15896] The long-press function is now available on the **Material Overview** screen, enabling users to select multiple materials from the search or filter results and perform the following actions:
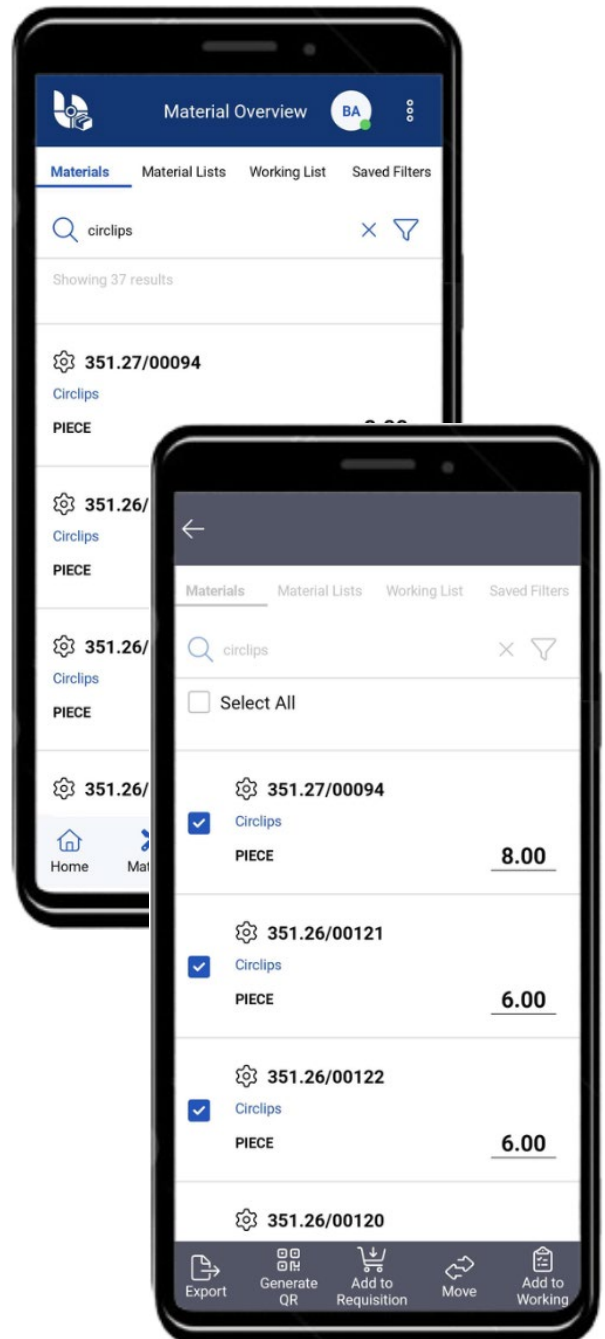

Export: Generate the **Material List** PDF report containing the details of the selected materials

Generate QR: Generate a PDF list containing the QR codes of each selected material.

Add to Requisition: Add the selected materials to **Requisition** – **Pending Drafts**.

Move: Move the stock location of the material from its original location to a new location.
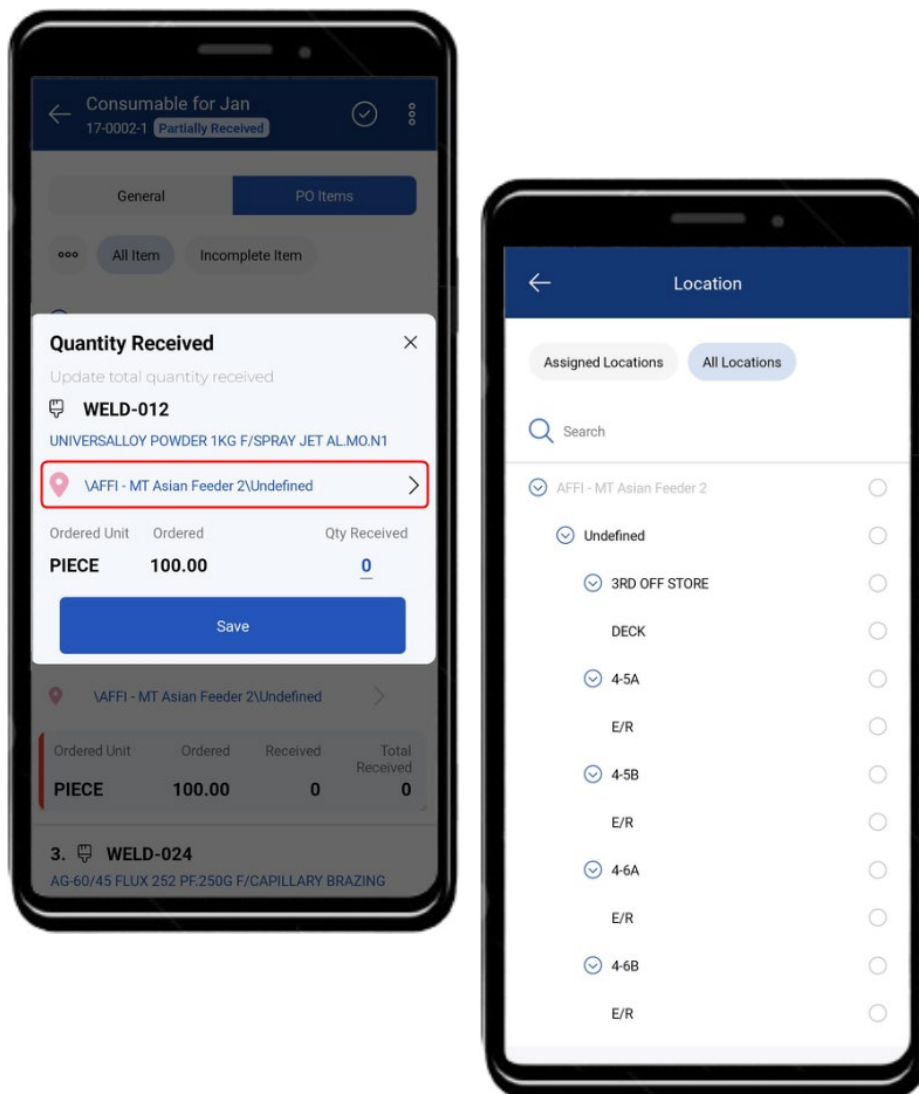

Add to Working List: Add the selected materials to the Working List to update later.

❑ **Goods Receipt: Set a Different Location for PO Items**

[CR 15731, 15735] The App now allows users to assign a different location for PO items if the location is set to a default location when performing PO goods receipt.

Users can select from the **Assigned Locations** list or select a new location from the **All Locations** list in the **Location** lookup. The selected location will be added to the PO item as both the Assigned and Received location for the Quantity Received but will not replace the default location.
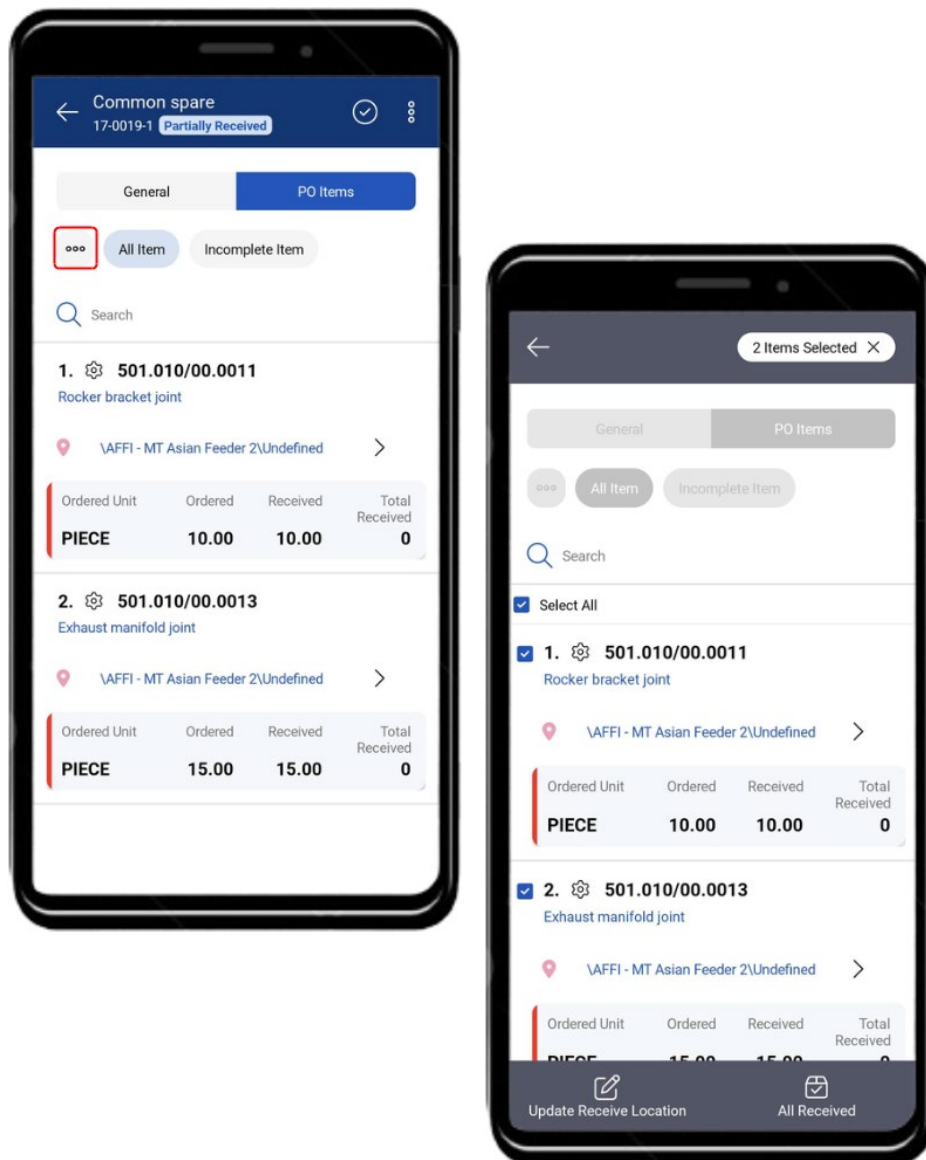

❑ **Goods Receipt: Batch Update Multiple PO Items**

[CR 15913, 15912] The App now supports batch updating multiple PO items when performing PO goods receipt.
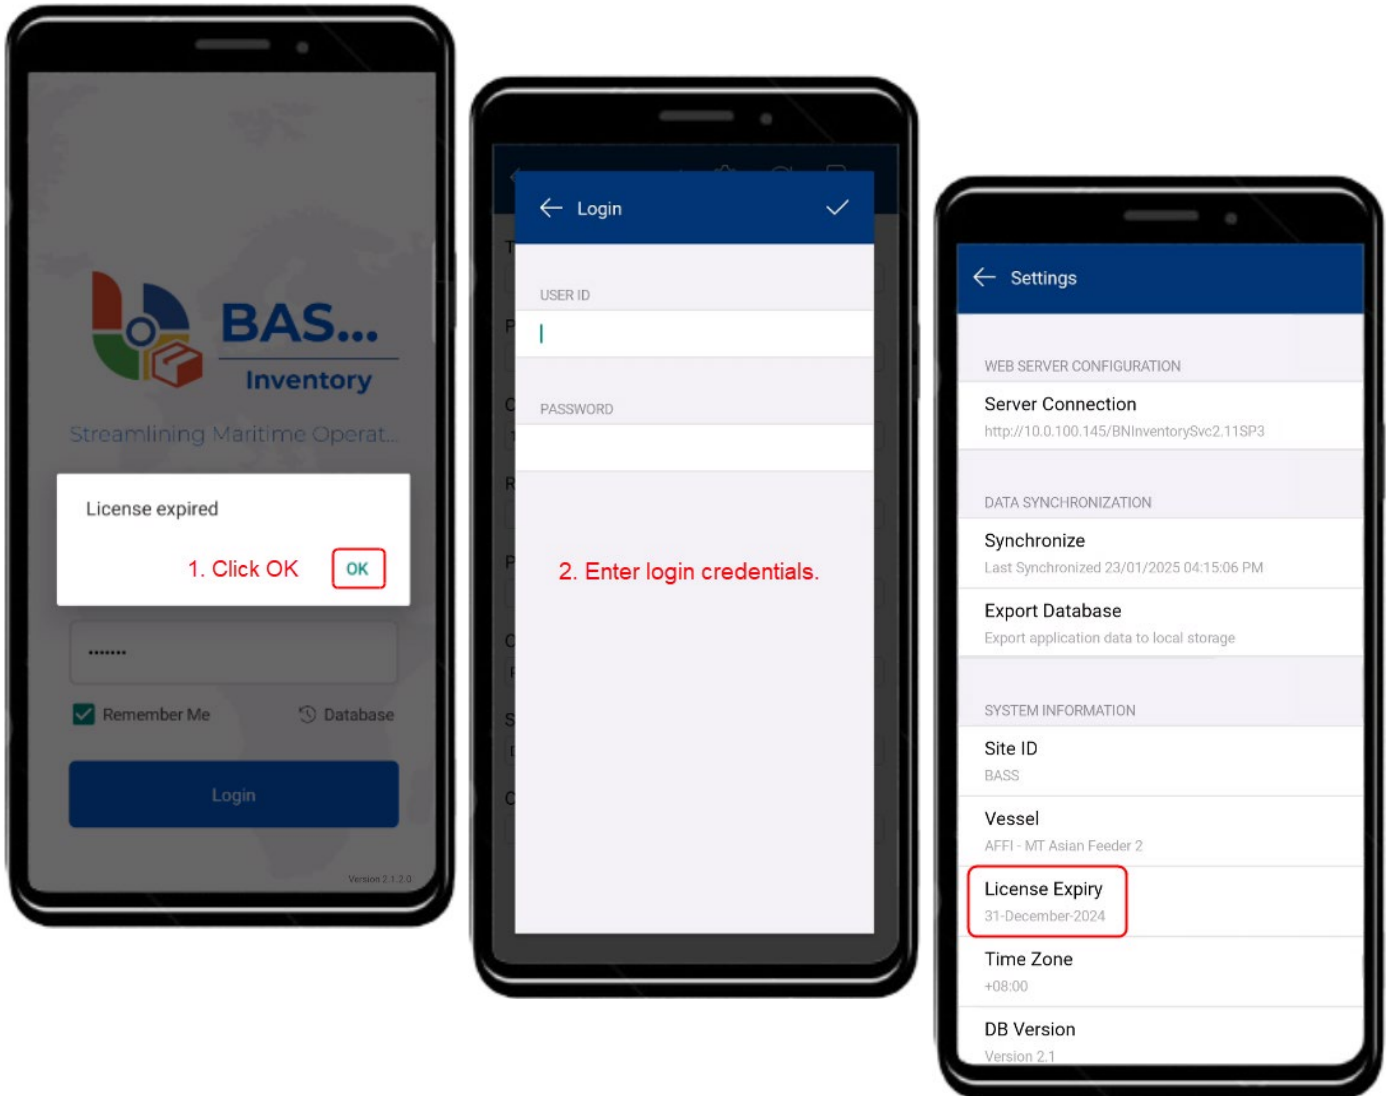

A new three-dot button (°°°) has been added under the **PO Items** tab. When users tap the button, check boxes will be displayed next to each PO item for selection with two batch update options displayed at the bottom:

- **Update Receive Location:** Batch update the receiving location of the selected PO items. This option is disabled if the selected items' Quantity Received is not updated.

- **All Received:** Batch update the selected PO items to 'All Received' (Quantity Ordered = Quantity Received). You can then update their receiving location all at once when the option above is enabled.

❑ **License Renewal: Automatic Redirect to Settings Screen**

[CR 15897, 13425] The App now redirects users to the **Settings** screen to renew their license upon expiration, replacing the previous notification-only design. This upgrade enhances the user interface for a more intuitive license renewal process.
