This release addresses the following issues:

This release note describes the system corrections (as reported by Customers) and new enhancements, if any, made in BASSnet 2.10 carried out in the Hotfix 3-206 patch released on 25th April 2024.

Enhancements/fixes have been implemented in the following modules:

[Procurement](#)

[SAFIR, Risk, Reviews & Improvements](#)

Recent Changes

1. Procurement

- [81331] Improved system performance when processing the **Quantity Approved is Changed** alert and cancelling requisition entries.
- [81332] Resolved an issue on the **Purchase Order** screen where the **WH Qty Received** column was not editable after an invoice was connected to the Purchase Order.
- [81334] Resolved an issue where the materials' Component ID was missing when Material Transaction was performed using BASSnet Procurement (i.e. updating PO to Fully Received).

2. SAFIR, Risk, Reviews & Improvements

- [80901, 80902, 80903] Resolved an issue where an attached document in a record that was replicated (Attach and Send) before the record was saved overwrote a document of the same name that was previously replicated in a similar manner.

For example, if a new report is created on vessel A with attached document name 'X' and replicated to office without first saving the record, then another new report is created on vessel B with attached document 'X' and replicated to office without first saving the record, the document from vessel B would overwrite the document from vessel A.
