New Features & Enhancements

- **Inventory App Now Available on iOS**

  The Inventory App is now also available on iOS and can be downloaded directly from the Apple App Store.

  You can also scan the QR code below to access the App Store:

  Note: The iOS version is compatible with BN2.11SP3HF6 and later versions.
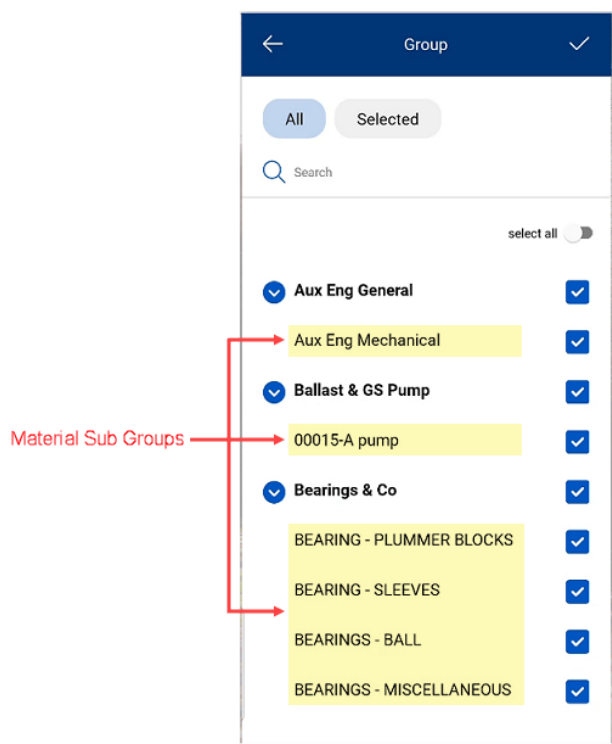

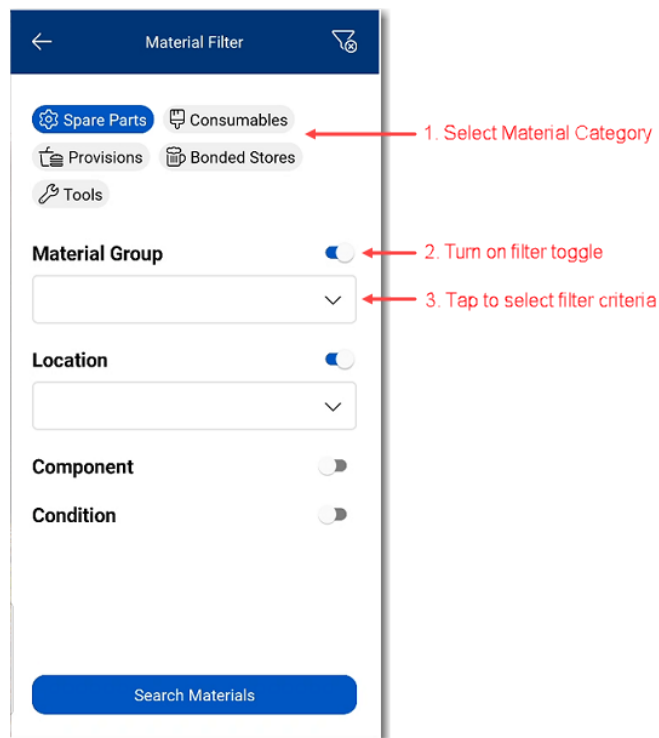

- **Filter & Search Results Count**

[CR 15732, 15736] The App will now display the count of matching results after users filter or search for materials, making it easier for users to see how many records were returned that meet the filter/search criteria.

❑ **Improvements to Material Filtering**

[CR 15729, 15312] The Material Filter screen has been enhanced for more precise filtering with fewer steps, making it easier for users to fine-tune their selections and quickly find materials that best match the filter criteria applied.

The following updates have been made to support this enhancement:

▪ The Material categories are displayed as menu options at the top for easier selection.

▪ Filters are added as toggles, allowing users to easily switch the toggles on or off. When a filter is toggled on, users can then select the specific criteria they want to apply under that filter.

Material Sub Groups are now included as a tree list and available for selection under the **Material Group** filter.
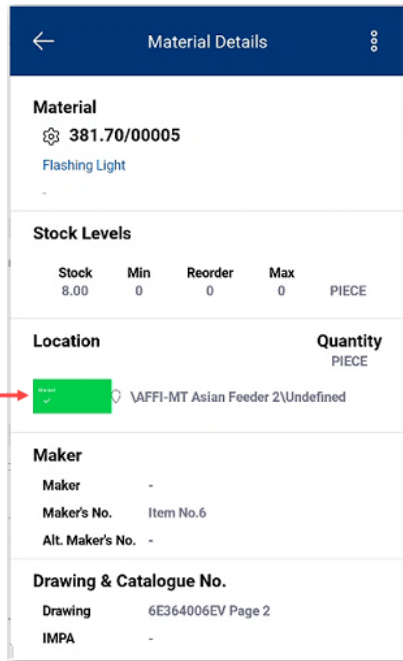

This update aligns with the **Materials** module in BASSnet where Material Groups and Sub Groups are linked and frequently used as combination filters to narrow down material search results.

❑ **Direct Stock Check from Material Details**

[CR 15480, 15728] Users can now perform stock check directly from the **Material Details** screen by swiping right on the Location if the stock quantity matches the physical quantity at the Location.
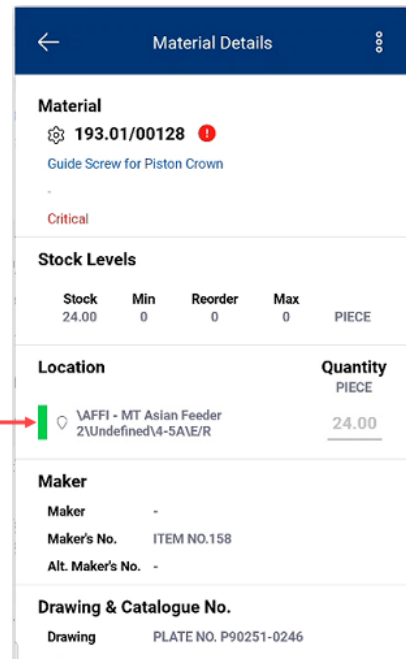

With this enhancement, users can perform stock check for materials without needing to add the materials to a **Material List** first.

If there are no changes to the quantity after stock check, swipe right on the material's Location

Additionally, when users perform stock check for a material in the **Material List** by swiping right, the green 'Checked' indicator will now be reflected on the **Material Details** screen (indicating no changes to the stock quantity at the Location).

Materials marked as 'Checked' from the Material List will be reflected in the Material Details Location with the green indicator
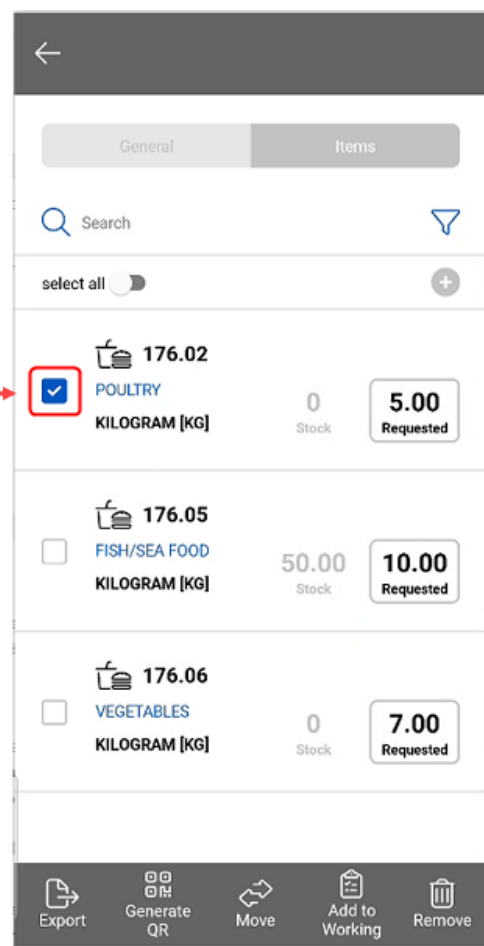

❑ **Update to the Tap & Hold / Long-Press Behaviour**

[CR 15733, 15737] For screens that require users to long-press a record to activate the selection mode (select multiple records), the record that is long-pressed will now be auto selected, and users can then select any remaining records in the list accordingly.

This update applies to the following screens:

Module	Screen
Materials	Material List – Items tab
Materials	Move Materials
Purchase Order	Purchase Order 'overview' screen
Requisition	Pending Drafts – Items tab
Requisition	Transferred – Items tab

When this record is long-pressed to activate the selection mode, the check box for the record will be selected by default.
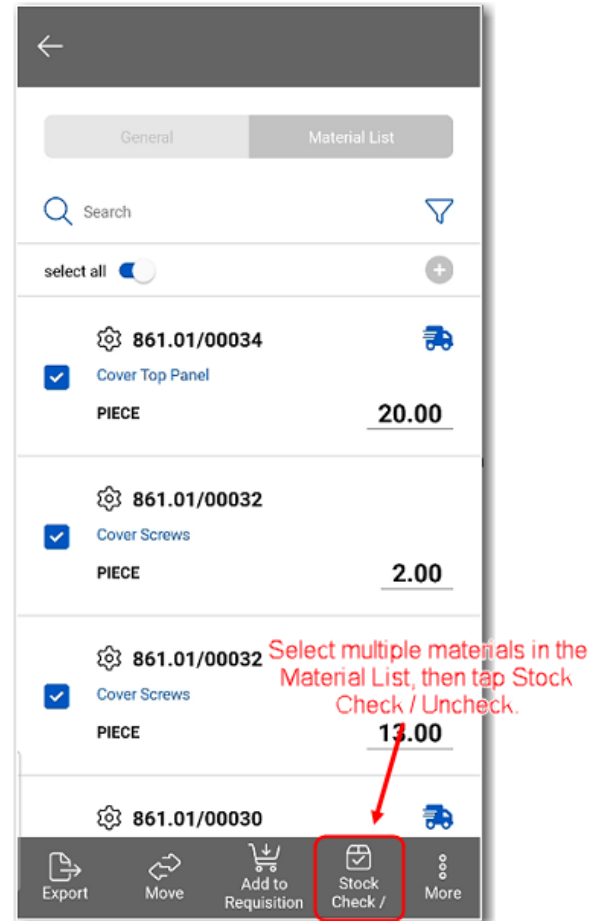

❑ **Perform Stock Check on Multiple Materials Simultaneously**

[CR 15734, 15738] A new **Stock Check / Uncheck** option has been added to the long-press menu at the bottom of the **Material List** screen, allowing users to perform stock check for multiple materials at once (or uncheck materials if required).

The steps below describe how to perform stock check for multiple materials following this enhancement:

1. **Activate selection mode:** Long-press a material in the **Material List** to display the check boxes for each material.
2. **Select materials:** Select the check boxes for multiple materials or turn on the **'select all'** toggle to select all materials.
3. **Perform stock check:** Tap the **Stock Check** option at the bottom to mark the selected materials as 'checked'.

❑ **Finance Transaction Logic to Support BASSnet Procurement**

[CR 15740, 15741] The Finance Transaction logic applied in the BASSnet Procurement module is now incorporated into the App to ensure accurate financial processing in BASSnet when Purchase Orders are updated in the app based on the configuration and settings of the company.
